

Creating Project Plan, Timeline, and Schedule

Configuring Codex to Be a Capstone Project Assistant

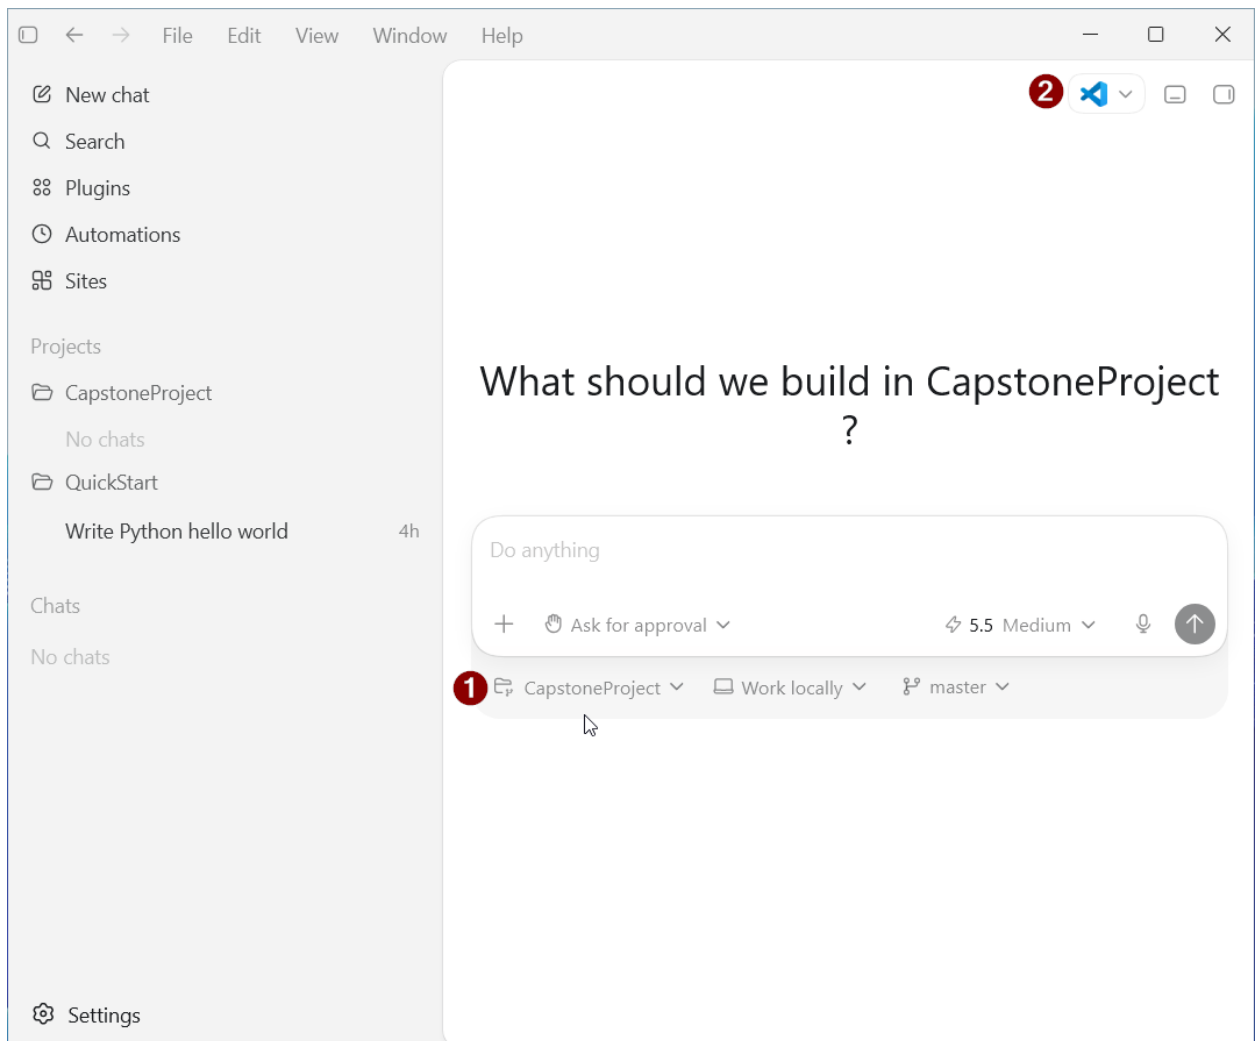

1. Providing your information to Codex, from ①Settings go to ②Profile,

2. Personalize Codex **to your style**, below is the instructor's demo style,

3. Tell Codex what I am doing right now. Create a project named “CapstoneProject”,

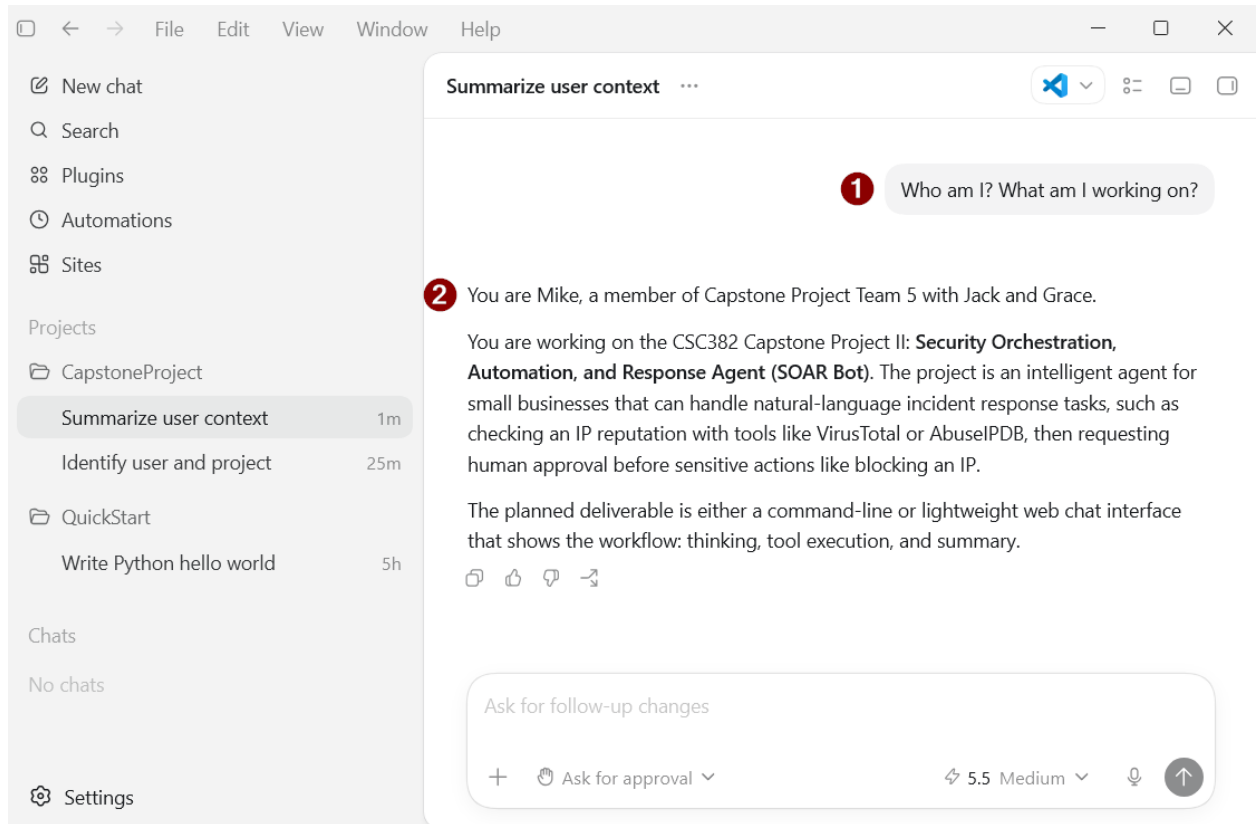

4. Then create a markdown file **AGENTS.md** (must be this name) in the folder CapstoneProject. Below is project #2 🤖 Security Orchestration, Automation, and Response Agent (SOAR Bot) used as demonstration. **Tell your Codex your chosen project**

accordingly.

AGENTS.md 1 U
AGENTS.md > ## Background
1 ## Project 2
2 - Title: Security Orchestration, Automation, and Response Agent (SOAR Bot)
3 - Scenario: Small businesses lack a full Security Operations Center (SOC) and want
  natural-language-driven incident response.
4 - Approach: Build an intelligent agent using LangChain or AutoGPT with tools such as
  VirusTotal lookup, AbuseIPDB reputation checks, simulated firewall IP blocking APIs, and
  alerting integrations (Slack, Teams, etc.). Users can issue commands such as: "Check IP
  1.2.3.4 and block it if malicious." The agent decomposes the task and executes the
  workflow automatically.
5 - Key Technologies: Agent tool calling, external API integration, conversational memory.
6 - Deliverable: A command-line or lightweight web-based chat interface displaying the
  agent workflow (thinking → tool execution → summary).
7 - Advanced Component: Add a human approval step before sensitive actions such as
  blocking an IP address.
8
9 ## Background 3
10 - This is a capstone project of class CSC382 Capstone Project II
11 - The class runs as an 8-weeks summer session (6/1-7/28)
12   - Week 1 (6/1-6/5):
13     - Go through the syllabus
14     - Install Windows server 2025 VM and Ubuntu 24.04 LTS VM on Google Cloud
15     - Select project topic and form team
16   - Week 2 (6/8-6/12):
17     - Install required software Git, Python, Node js, and VS Code
18     - Create project plan, timeline, and schedule
19   - Week 3-8:
20     - Work on the project according to the schedule
21     - 7/27-7/28: Final presentation and demonstration
22 - Team: Jack, Grace, and Mike 4

5. Save AGENTS.md, close VS Code. Test the personalization and configuration are all set,

Creating Project Plan, Timeline, and Schedule

1. Ask Codex to create a detailed project plan for you,

The screenshot shows the Microsoft Copilot interface. On the left is a sidebar with navigation options: New chat, Search, Plugins, Automations, Sites, Projects (with a sub-item 'CapstoneProject'), Chats, and No chats. The main area is titled 'Summarize user context' and contains a list of tasks for a capstone project. The tasks are: 1. Create a detailed plan for our capstone project, save it as a Word docx file. Show me for a review before saving it. - divide the project into stages (milestones) - divide each milestone into 3 subtasks, and assign them to the three members correspondingly - list the outputs produced by each subtask - provide measurement on each output - create a timeline to schedule the milestones and tasks from 6/15 through 7/24 - 7/27-7/28 for final presentation and demonstration. 2. Below is the draft plan for review. I have not saved the .docx file yet. After you approve or request edits, I will create the Word document in C:\Users\ufidon\Documents\CapstoneProject. The draft plan includes: Capstone Project Plan Draft, Project Title: Security Orchestration, Automation, and Response Agent (SOAR Bot), Team: Jack, Grace, Mike, Final Presentation and Demonstration: July 27-28, 2026, Project Goal: Build a command-line or lightweight web-based SOAR Bot that allows a user to issue natural-language incident response commands, such as: 'Check IP 1 2 3 4 and block it if malicious.'

Summarize user context ...

1 Create a detailed plan for our capstone project, save it as a Word docx file. Show me for a review before saving it.

- divide the project into stages (milestones)
- divide each milestone into 3 subtasks, and assign them to the three members correspondingly
- list the outputs produced by each subtask
- provide measurement on each output
- create a timeline to schedule the milestones and tasks from 6/15 through 7/24
- 7/27-7/28 for final presentation and demonstration

2 Below is the draft plan for review. I have not saved the .docx file yet. After you approve or request edits, I will create the Word document in C:\Users\ufidon\Documents\CapstoneProject.

Capstone Project Plan Draft

Project Title: **Security Orchestration, Automation, and Response Agent (SOAR Bot)**

Team: **Jack, Grace, Mike**

Final Presentation and Demonstration: **July 27-28, 2026**

Project Goal

Build a command-line or lightweight web-based SOAR Bot that allows a user to issue natural-language incident response commands, such as: ↓

“Check IP 1 2 3 4 and block it if malicious.”

Ask for follow-up changes

⊕ ⚙ Ask for approval ▾ 5.5 Medium ↗

2. Each team member now has a plan, schedule a team meeting to discuss your three plans and merge them together, submit a single copy in PDF as a team. Each team member must sign the plan before submission.
