Test Your OPENAI API Key

```
PowerShell 34.148.123.105

=== Testing OpenAI API ===

❌ Error: Error code: 400 - {'error': {'message': "Unsupported parameter: 'max_tokens' is not supported with this model. Use 'max_completion_tokens' instead.", 'type': 'invalid_request_error', 'param': 'max_tokens', 'code': 'unsupported_parameter'}}
PS C:\Users\redmanderrick\Desktop> python app.py
=== Listing Available Models ===

gpt-5.4-nano-2026-03-17

=== Testing OpenAI API ===

Recursion is a way to solve a problem by having a function call itself to break the problem into smaller versions of the same problem.

**How it works:**
1. **Base case:** a condition where the recursion stops.
2. **Recursive step:** the function calls itself with a smaller/simpler input.

**Example (factorial):**
"Factorial of 'n'" (written 'n!') can be defined as:
- If 'n = 0', then '0! = 1' (base case)
- If 'n > 0', then 'n! = n x (n-1)!' (recursive step)

So the function:
- calls itself for 'n-'

✅ SUCCESS! OpenAI API is working.
